DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
- 2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rotzinger et al alone, or in view of GB 2,301,106.

Rotzinger et al discloses the stabilization of olefin polymers prepared by polymerization over a transition metallocene catalyst, by utilizing, *inter alia*, a sterically hindered amine. Corresponding to applicant's compounds of formulae AI, AII and AII and B-I, B-II and B-III. Patentee further indicates that metal soaps and metal salts may be added to the compositions as acid scavengers.

See the abstract and col.21 line 17 through col.41, line 49.

The British patent discloses combining compounds of applicant's formulae A-I or AII with compounds of applicant's formula B-I, polymers including polyolefins polymerized with a metallocene catalyst. See the first complete paragraph at page 43 and the claims.

Selection of any of the species of components at their prescribed weight ratios would have been obvious to one of ordinary skill in the art at the time of applicant's invention absent a clear showing of unexpected results attributable to a specific species and ratio. Likewise, in view of the

Art Unit: 1714

structural similarity of all of the HALS disclosed ,substitution of any of the species of HALS of Rotzinger et al with any of the species of HALS of the British reference t obtain their usual light stabilizing properties, would have also been obvious to the ordinary practitioner of this art absent a clear showing of unexpected results attributable to such a variation.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to K.Sanders whose telephone number is (703) 308-2435.
